Cultural Hints

Iris are without a doubt the most satisfactory of all garden flowers. Hardy and so easy to grow. July, August and the first part of September are the best time to plant Iris in this section of the country for best results. If planted later it is well to use a light mulch in cold climates.

They should be planted in a sunny, well drained location. Do not plant too deep. The top of the rhizome should be just covered with soil If planted too deep they will not bloom satisfactorily.

We use Bone Meal almost entirely as a fertilizer, occasionally we use well rotted barnyard manure or vigoro when we have a poor spot of ground.

They should be divided every 3 or 4 years so they do not become too crowded. Planting 3 of a variety in a group gives you a nice clump of color in a hurry.

The rhizomes of some varieties grow larger than others, so do not condem the small rhizones too hastily. It may be the normal size for that variety. Most oncobreds have small rhizomes.
